

AI Lead Scoring for Financial Advisors

A compliance-aware way to prioritize the right conversations while keeping judgment and review human.

THE PROBLEM

A full pipeline is not the same as a useful pipeline.

Attendees, referrals, inquiries, readers, and quiet contacts can all sit in the same CRM. Volume alone does not tell an advisor where attention belongs next.

Separate fit from intent.

Fit asks whether a person matches the firm's stated niche. Intent asks whether the person has shown a reason to engage now. Treating every click equally obscures both.

THE MODEL

Combine fit, intent, timing, and engagement.

The strongest workflow organizes approved signals into a reviewable queue. It explains why a contact surfaced, which source created the signal, and what a human should inspect.

Prioritize follow-up. Do not replace judgment.

AI can summarize and rank. It cannot make suitability determinations, replace professional judgment, or substitute for relationship building and required supervision.

THE CONTROL

Make every recommendation transparent and correctable.

A responsible system retains an audit trail, limits data access, documents scoring logic, and lets a person accept, change, or reject the proposed next step.

THE TAKEAWAY

Turn scattered attention into a visible, governed queue.

Start with one audience, one service line, and one conversion event. Review false positives, missed conversations, stale data, and message quality every month.
